#707 LEATHER CYLINDER CUPS

#707 Graphite coated leathers are made from the center of the hide, flesh side out. The graphite coating prevents fast absorption of water and acts as a lubricant to reduce binding of the plunger in the cylinder.

SPECIAL SOLID CENTER CUP LEATHERS

The following Solid Center (NO CENTER HOLE) Leather Cups are stocked in Denver. New leathers will measure smaller than their size implies. This is because they will swell in the water up to the proper size. Order leathers based on the ID (inside measurement) of the cylinder bore, not the measurement of an old leather.
