ZOELLER'S BASEMENT SENTRY Model #507

The Basement Sentry #507 is a 12 Volt backup sump pump system that you can add to your regular sump pump system to protect against power outages. When the power goes out, the Basement Sentry takes over to keep the sump dry. If your regular sump pump fails, the Basement Sentry will start working to prevent a problem caused by a high water condition. The model #507 is a 12V – 12 amp pump capable of pumping 23 gpm at 5 feet of head, or 12.5 gpm at 10 feet of head. The control box has burn out and overcharge protection, along with a 10 amp battery charger. The solid state control has lights to indicate power supply on, battery partially charged, battery fully charged, pump alarm off and a run light. An alarm will emit a continuous beep when the battery is low. System comes with the check valve, float switch, and fittings to install in to your current sump pump system. **Main sump pump system is not included. Customer needs to supply a marine grade deep cycle battery** with a minimum 180 minutes reserve capacity. A fully charged 175 minute reserve battery when the pump is operating continuously will run approximately 7.5 hours. Minimum 18" diameter x 24" deep basin.

\$ 277.00 507 **Basement Sentry #507** Backup sump pump system
\$ 669.00 510 **Special Ordere Model #510** When the head feet is more than 10 feet or when you need to be able to pump high volumes of water. The model 510 pumps 33.8 gpm at 5 feet of head, 21.6 gpm at 10 feet of head, and 10.6 gpm at 15 feet of head.

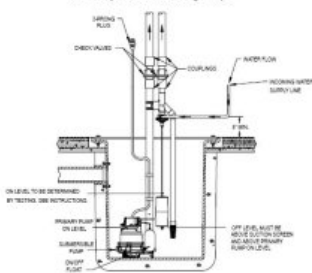

HOME GUARD MAX BACKUP SUMP PUMP

Zoeller's HOME GUARD MAX is a water powered backup sump pump system. Plumbed into your water line, and controlled by a rigid float, the Home Guard Max stands ready to take over for your regular sump pump in high water conditions, or when power is lost. There is no water used until the unit is needed. Then 1 gallon of water will pump 2 gallons of water from your pump basin. Pictured to the lower left is a drawing of a typical installation. The Home Guard is installed in the basin along side the regular sump pump. The discharge line is brought through the lid and into a separate discharge line. When the water in the sump rises to a level that lifts the float, the valve opens to allow water to flow, which starts to pump from the sump.

Typical Installation with Submersible Pump and Separate Discharge Pipe

AQUANOT FLOOD ALERT ALARM #10-0763

The AquaNot Flood Alert Alarm is a simple battery operated warning alarm that mounts on the wall with the sensor cord that hangs to just above the floor. When water contacts the 2 sensor points, the alarm is set off. It is an excellent way to know when you have a high water condition in your basement that needs tending to.
